MMCESL Your expert partner

With broad expertise and specialist knowledge

Expertise & Experience

MMCESL offers a broad portfolio of services for electrical, civil and other engineering and construction activities on any scale – with specialist expertise in high voltage environments.

Our well-respected engineers bring a wealth of knowledge and experience to all stages of a project – whether we are involved in one component or its full management.

We combine this know-how with a partnership approach to projects that ensures that we remain adaptable, responsive and attentive to our clients' needs.

Consequently, we have a proud record of meeting our clients' requirements with quality solutions, on time and within budget.

Partnership

Our clients range from multi-nationals with nationwide schemes, to privately-owned businesses with small, local projects.

Whatever their needs, a dedicated MMCESL team works in close partnership with all of our clients to develop and deliver the right solution.

An MMCESL director is involved in every project.

Not only does this make it easy for our clients to access senior MMCESL personnel at any time, but it ensures that efficient reporting regimes are established at the outset of a project. We can also act as an authoritative Client Representative to any external parties as required.

By providing such effective communication we make sure that a project is delivered in a way that satisfies all the various individual demands on it, as well as any relevant statutory obligations.

MMCESL's integrated approach also enables the status of the project to be continually re-evaluated and re-prioritised as it progresses, ensuring that projects are well coordinated and therefore cost-effective.

MMCESL Your expert partner

Committed to service excellence

Services & Capabilities

MMCESL's services include:

- Full project management
- CDM management (CDM Coordinator)
- Feasibility studies, impact assessments
- Project planning
- Tender development, management and evaluation
- Contractor selection and appointment
- Site supervision, Health & Safety monitoring
- In-house manufacture of bespoke substation control panels, specialising in retro-fits
- Installation and commissioning
- Ongoing maintenance and support

Broad Competence

MMCESL is competent in all roles required for Utilities, Engineering and Construction projects.

The services we offer are grounded in the training and knowledge of our team. As well as the activities listed our experts have the skills and calibre to provide a range of project management and support services, from consultancy, client representation and project planning and implementation to installation, supervision of work, witness testing and full commissioning.

Specialist Expertise

We have also established several areas of strong, specialist expertise. For example, we have significant experience of operating with all voltages from LV to EHV.

We have also been delivering CDM management (CDM Coordinator) services since the inception of the CDM Regulations in 1995 and are fully conversant with the 2007 CDM Regulations.

Safety

All our experts have a thorough understanding of the latest Health & Safety regulations, particularly those relevant to the Electricity Distribution and Construction industries.

As a result of strictly adhering to industry best practices, MMCESL has an excellent safety record.

Qualified

MMCESL has the experience, skills and accreditations to deliver quality projects safely and to standard.

MMCESL is:

- ISO 9001 : 2008 registered
- ISO 14001 : 2004 registered
- NEBOSH certified (Construction)
- UDVb Achilles Verify supplier (83635)
- Corporate Member of APS
- Accredited Member of ECA
- MCS Registered Installer
- Competent to operation in high voltage environments
